EXPERIENCE

Senior Software Engineer

VentureDive

🕒 06/2022 - Present 📍 Karāchi, Sindh, Pakistan

A software solutions company specializing in enterprise-level applications

- Designed and implemented dynamic, multi-step forms using Angular 18, PrimeNG, and Formly, enabling schema-driven wizards with conditional logic and validation
- Built reusable Formly field types like FormlyFieldRepeatCrud, supporting CRUD operations within dynamic tables using FormArray, enhancing data entry efficiency
- Integrated PrimeNG components within Shadow DOM to encapsulate styles and prevent leakage across micro frontends and isolated modules
- Translated high-fidelity Figma designs into responsive, pixel-perfect Angular components, ensuring UI consistency and a polished user experience across the platform
- Developed the frontend for Financial Risk Calculator, visualizing real-time risk scores based on configurable parameters with dynamic risk breakdown and visual indicators
- Created interactive SAR (Suspicious Activity Report) views with searchable/filterable tables, risk flags, and compliance-triggered actions
- Built Onboarding Report and Risk Assessment dashboards, allowing compliance teams to monitor applicant status, verification completeness, and calculated risk levels in real time
- Implemented tenant-aware UI for audit logs, sales analytics, and login tracking, including advanced filtering, pagination, and dynamic report export
- Led the migration from Angular 17 to Angular 18, resolving breaking changes in standalone components, reactive forms, and dependency updates across the codebase
- Managed a complete redesign of PrimeNG themes from v17 to v18, refactoring global styles, component classes, and layouts to align with the new Tailwind-based theming and design token system
- Integrated a robust multi-language translation feature using Angular i18n and dynamic language switching, enhancing accessibility for global users across tenants

Senior Software Developer Team Lead

Zaavia

🕒 07/2020 - 06/2022 📍 Karāchi, Sindh, Pakistan

A technology company focusing on custom software solutions

- Architected and integrated a complex Stripe payment gateway, supporting Apple Pay, Google Pay, and credit card payments for seamless ticket purchases
- Developed a fully functional Tenant Portal for managing user activity, reports, and payments, providing partners with real-time insights and control
- Built dynamic, multi-tenant reporting modules including Audit Reports, Sales Reports, and Tenant Login Reports, with filtering, pagination, and export features
- Engineered robust backend services in NestJS, including scheduled tasks and secure APIs, ensuring scalability and reliability
- Designed a modern, responsive frontend using ReactJS, delivering a seamless experience for both users and providers
- Integrated the Matterport SDK to enable the loading of 3D tours for the Digital Twin Project
- Developed a custom solution to incorporate the Virtual Wall/Tags feature by leveraging the Matterport SDK APIs
- Developed Rest APIs using NestJS and Web Components using ReactJS
- Developed a custom solution for generating thumbnails of uploaded images and videos by utilizing S3 and Lambda Trigger functionalities
- Held face-to-face or virtual meetings with clients to discuss their requirements and development needs
- Designed and developed new user interface components
- Worked on migration from Dojo ToolKit to Angular
- Fixed a legacy code bug in one of the UI components
- Wrote Unit Tests of Components
- Developed RESTful APIs for various modules in the internal project Vendian, designed and developed new user interface components, and developed a Bench Report that minimized leadership effort by 90%

SUMMARY

I am a seasoned software professional with a strong focus on front-end development and exceptional problem-solving skills. With a creative approach to coding, I strive to enhance user experiences through innovative solutions. My experience spans various domains, including payment integration and dynamic user interfaces, and I am passionate about ensuring software quality and efficiency.

KEY ACHIEVEMENTS

Optimized Data Entry

Increased data entry efficiency by 40% with Forms implementation.

Form field generation

Using Formly make it easy field generation

Improved Leadership Efficiency

Reduced leadership effort by 90% in Vendian project.

Enhanced UI Design

Enhanced UI component design reducing bugs by 25%.

Optimized 3D Tours

Streamlined 3D tour loading process by 30% using SDK.

EXPERIENCE

Freelance Web Developer

Fiverr

05/2019 - 04/2020 Karāchi, Sindh, Pakistan

A freelance platform for offering services in various fields including web development

Software Developer

Zaavia

05/2019 - 06/2022 Karāchi, Sindh, Pakistan

A comprehensive software solutions company

- Designed, developed, and maintained software for Blood Banking Management System focusing on compliance standards
- Developed middleware for dynamic uploading to specific storage service
- Collaborated with teams for generic solutions and conducted feature explanation sessions
- Provided software support and engaged with clients about software flows
- Designed UI for Referral Testing System and integrated APIs while fixing legacy code bugs
- Contributed to UI design and API integration for Team Management System
- Led new features and optimized RESTful APIs with role-based authorization in Document Archival System
- Led feature development and integrated payment modules in ZUNBEEL: Electronic Document Management while collaborating for generic solutions
