Professional Experience

ZerefLab. | Software Engineer

June 2024 – Present

Projects
- Where2:
Where2 is an app that I have developed from scratch for both platform iOS and android. Where2 is an Event management app, it's purpose is to vote who are going to that specific event. This app is specifically design for Foreign students so that they know where to go ,know who's going. I have worked on it UI from scratch and implemented api for it's onboarding section

TxLABZ. | Software Engineer

April 2023 – November 2023

Projects
- Maweidi:
Maweidi is a health care app that will be used in Qatar, In this app you can book appointment with specific doctor, buy medical equipment, book test appointment, look for list of hospital ,buy pharmacy products. My Role in app is to create UI and api implementation.
- Wits:
Wits is a quiz game app having different modules. This app is live on both playstore and applestore. My role is to work on it's video call module which is developed using LivekitSdk ,Ui fixes, bugfixes, Ios notifications ,Api integration and publishing app on both play store and Apple store

- Audivi:
Is a project develop for people who are suffering from disease in which they forget things. Purpose of this app to create their memories of audio ,video ,pictures form. Here we can also add collaborator from that app user and can make your data public or private. It's an Expo project that is available on playstore and apple store. My role in this project is UI fixes, bug fixes , app crash issue etc.
- Manna Fortunes:
Is an expo app created for clubs lucky draws in other countries. My role is to work on it's UI fixes, new functionality, expo notification and cloud functions

E-sparks | Associate Software Engineer
Januaryl 2022 – Mar 2023

Projects
OstaadG:
OstaadG is an online appointment booking app between cadet and client. This Project has two apps one for cadet and one for client Here cadet can be(plumber, carpenter,electrician etc) we can book their services. In this we are showing both cadet and client position. We also use Firebase push notification in it.
DoctRing:
DoctRing is a medical app In which patient can book appointment with their desire Doctor for Online or Home Visit both type. This Project also have two apps one for Doctors and other for patient. In this I have used twilio for video calling, google maps for homevisit appointment and firebase push notifications.

MetaBuddy:
Metabuddy is an app use in production, video, pics & mostly depending on documentation of a photographer company. In which we locally store data to stop paper work.
